"It [SurfControl E-mail Filter] offers the most precise options for fighting spam among the products we reviewed..."

"Control over responses for individual users is precise. On a tabbed screen, you can select specific users and which rules to apply to the incoming mail, then how to respond to spam and other mail categories. You can have the system delete, delay, or quarantine the suspected spam. This part of the interface is innovative, because conditions for rules are highlighted as you move your mouse over the options. On the back end, SurfControl E-mail Filter uses hashes, blacklists and whitelists, and lexical analysis."

"SurfControl E-mail Filter offers the most administrative tools of the solutions we reviewed..."
